Military Backpack System

Inside Compartment

Hidden Aluminum Frame

Frame Stay. To achieve the best fit possible and to realize the true weight distribution/ carriage capabilities of this engineered pack system, the frame stays in the pack, which are designed to distribute the weight of the pack to the shoulders and hip regions, should be curved to conform with the wearer's particular back shape.

The Improved Load Bearing Equipment (ILBE) is a United States Marine Corps program that had included individual load carriage equipment, individual hydration systems (Source One Hydration) and individual water purification. Since the rucksack was the first component of the program to be issued to Marines, the rucksack is commonly referred to as simply the ILBE. The ILBE rucksack was designed to replace the long existing All-purpose Lightweight Individual Carrying Equipment (ALICE) and newer Modular Lightweight Load-carrying Equipment (MOLLE) packs.

UTX Buckle

UTX D-Ring

Quick Release

Hip Belt. The ILBE Pack System comes equipped with a men's medium belt to ensure full contact over the entire surface area of the hip belt regardless of the hip shape of the wearer. Fine-Tuning Your Hip Belt is possible by adjusting the angle at which the webbing. To tighten the hip belt, pull on the webbing material at either side of the hip belt buckle.

ILBE Hip Belt

Assault Pack

A- Shoulder Straps.

The assault pack comes with "one size fits all" shoulder straps. Adjust the size of these straps by pulling down or paying-out webbing material at strap buckle.

Hydration Hole

YKK Zipper

UTX Buckle

B- Sternum Strap.

Adjust this strap to better secure the assault pack around the chest region. Applying this strap will reduce the side-to-side motion of the top part of the pack system.

The ILBE can hold up to 120 pounds (54 kg) of weight, and has room for both 60mm and 81mm mortar rounds outside the main pack. Specialized bags and pouches for corpsmen and reconnaissance units are also available.

The ILBE system includes 3 types of packs:

- Main Pack (75L)
- Assault Pack (27L)
- Hydration System (3L)

The assault packs, with their smaller volume and lower weight capacities, are intended for wear in combat, while the larger main packs are intended to carry everything needed by a unit on the march. A set of packs consists of a main pack, an assault pack, and a hydration system.

Hydration System

The ILBE Pack System comes equipped with a 3L hydration system designed to keep the Marine/ Sailor well hydrated while on the move. Flexibility has been built into this component in that the item can either be worn by using the shoulder straps on the system.
